## 4 1 Introduction

- <sup>25</sup> [done] Read into background information on D-SPECT
- <sup>26</sup> [done] Write global background information
- <sup>27</sup> [done] Introduce the rest of the document
- <sup>28</sup> There are various types of scanners that use different techniques. Examples are Computed
- 29 Tomography (CT), Magnetic Resonance Imaging (MRI), or Scintigraphy (SPECT/PET) scan-
- ners. In cardiology, the SPECT scanner is widely employed for coronary and myocardial perfu-
- sion measurements (Rahmim and Zaidi, 2008). It is known that PET scans are generally more
- expensive (Hlatky et al., 2014; Goel et al., 2014). Hlatky et al. (2014) followed patients for two
- years, recording the costs and concluded that PET costs are 22% higher than the costs for SPECT
- <sup>34</sup> for patients with suspected Coronary Artery Disease (CAD).
- The imaging method in a typical SPECT scanner are scintillator-based gamma cameras, also
- so known as Anger cameras. Gamma cameras use a scintillator to "transduce" gamma radiation,
- originating from an injected tracer, to photons. Part of these photons are directed towards
- a series of dynodes in Photomultiplier Tubes(PMTs), directly behind the scintillator, via a fo-
- cusing electrode. Electrons that hit a dynode trigger the process of secondary emission (pho-
- toelectric effect), multiplying the number of electrons travelling through the tube. Electrons
- hitting the last dynode, also known as the anode, cause a current pulse which can be detected
- by measuring equipment. It is proportional to the amount of gamma ray photons entering the
- scintillator(GE Healthcare, 2009).
- Developments in imaging systems gave rise to the Digital SPECT scanner. In contrast to the
- 45 analogue Anger cameras, the D-SPECT scanner utilises a direct conversion semiconductor:
- <sup>46</sup> Cadmium Zinc Telluride (CZT). Wagenaar (2004) used CZT to develop pixelated detector units
- 47 which can be used for medical imaging. In a recent study, it is shown that a Digital SPECT
- scanner, using multiple pixelated CZT detectors, showed significant improvements in image
- sharpness and contrast (Goshen et al., 2018). These detector units do not require PMTs and thus
- <sup>50</sup> allow for a more compact and flexible design (Erlandsson et al., 2009). The D-SPECT scanner,
- developed by Spectrum Dynamics<sup>1</sup>, offers improvements in sensitivity and energy resolution
- 52 (Spectrum Dynamics, 2016) over Anger camera systems. However, these digital systems are
- relatively new and require proper validation to convince medical personnel of its value.

#### 4 1.1 Document overview

- 55 The project plan consists of a (short) literature review of existing myocardial perfusion
- 56 phantoms and more extensive information on D-SPECT scanners (their technical background,
- 57 limitations, and so forth). The literature is followed by the research methodology containing
- the research questions and goals of the project. The detailed planning is the last section of the
- 59 project plan.

<sup>&</sup>lt;sup>1</sup>https://www.spectrum-dynamics.com/

## 2 Literature

- 61 [todo] Read available literature
- 62 [todo] Write literature review to more accurately define research questions
- 63 [todo] Read available literature over D-SPECT (for requirements)

# **3 Research methodology**

65 [todo] Define research questions

## 4 Planning

- 67 [done] Create graphical planning
- 68 [done] Create workday overview
- 69 [done] Create week overview
- <sup>70</sup> [done] Define deadlines
- 71 [inpr] Define meetings: frequency, type, and already planned
- This chapter details the planning for the 40ECTS final thesis, carried out under the Robotics and
- Mechatronics Chair of the University of Twente. The project will be caried out in two phases;
- proof-of-concept (phase 1) and definitive (phase 2). The Gantt planning for phase 1 and 2 can
- be found in appendix B in figures B.1 and B.2 respectively.

### 76 4.1 Workdays

The planning is based on 28 hours per European Credit as per Dutch standard. The final thesis

is carried out full-time (40 hours per week). The overview of working hours is shown in table 4.1.

| Day            | Start time | End time | Productive hours |
|----------------|------------|----------|------------------|
| Monday         | 08:30      | 16:00    | 7                |
| Tuesday        | 08:30      | 17:00    | 8                |
| Wednesday      | 08:30      | 16:00    | 7                |
| Thursday       | 08:30      | 17:00    | 8                |
| Friday         | 08:30      | 17:00    | 8                |
| Miscellaneous* |            |          | 2                |
| Total:         |            |          | 40               |

<sup>\*</sup> Miscellaneous hours are in evenings, weekends or during train rides.

Table 4.1: Workdays and -hours

#### 4.2 Work weeks

79

80

81

82

- Discuss work days between christmas and new-year
- · Discuss work days on holidays
- The works weeks can be found in table A.1 in appendix A.
- The project planning spans 35 weeks. Activities are planned from week 49 of 2018 up until, and
- 85 including, week 28 of 2019 which spans a total of 32 weeks. Week 29 will be used to finalise
- <sub>86</sub> practical aspects; handing in material and documentation, report printing, and so forth. The
- graduation presentation (and ceremony) will additionally take place in week 29. Weeks 30 and
- 88 31 of 2019 can serve as an extension if, and only if, approved by the assessment- and exam
- 89 committee.
- <sub>90</sub> The planning takes into account one week around Christmas and new-years, one week spring
- break ("voorjaarsvakantie") in 2019, and a two week buffer. See section 4.3 for more details.

#### 92 4.3 off-days

- The University of Twente recognises three general holidays, New Year's day, King's Birthday and
- Liberation day, and six Christian holidays, Good Friday, Easter Monday, Ascension day, Whit
- 95 Monday, Christmas day, and Boxing day<sup>1</sup>. Furthermore, the university recognises five bridging
- 96 days in 2018 and fout bridging days in 2019 <sup>2</sup>.
- Both the King's Birthday as well as Liberation day falls in weekends. The remainder of the holi-
- 98 days and bridging days are summarised in table 4.2.

| Holiday              | Date             | Note                            |
|----------------------|------------------|---------------------------------|
| Bridging day         | 2018 December 24 | Collective closure <sup>2</sup> |
| Christmas day        | 2018 December 25 | Christian holiday <sup>1</sup>  |
| Boxing day           | 2018 December 26 | Christian holiday <sup>1</sup>  |
| Bridging day         | 2018 December 27 | Collective closure <sup>2</sup> |
| <b>Bridging day</b>  | 2018 December 28 | Collective closure <sup>2</sup> |
| <b>Bridging day</b>  | 2018 December 31 | Collective closure <sup>2</sup> |
| New Year's day       | 2019 January 1   | General holidays <sup>1</sup>   |
| Good Friday          | 2019 April 19    | Christian holiday <sup>1</sup>  |
| <b>Easter Monday</b> | 2019 April 22    | Christian holiday <sup>1</sup>  |
| <b>Ascension Day</b> | 2019 May 30      | Christian holiday <sup>1</sup>  |
| <b>Bridging day</b>  | 2019 May 31      | Collective closure <sup>2</sup> |
| Whit Monday          | 2019 June 10     | Christian holiday <sup>1</sup>  |

Table 4.2: Off-days

Week 4 of 2019 is a planned vacation and no work will be done. This off-week spans from Monday 21<sup>st</sup> of January 2019 until, and including, Friday 25<sup>th</sup> of January 2019.

## 101 [todo] Update time of lectures

102 Currently, three lectures are planned which will result in an absent from the workplace in order to follow these lectures. These lectures are summarised in table 4.3.

| What                | Day      | Date             | When                      |
|---------------------|----------|------------------|---------------------------|
| CT lecture          | Thursday | 2018 December 20 | Afternoon*                |
| PET lecture         | Thursday | 2019 January 10  | Second half of afternoon* |
| PET/SPECT Radiology | Monday   | 2019 January 14  | Unknown*                  |

<sup>\*</sup> Times will be updated when known

Table 4.3: Planned lectures

<sup>&</sup>lt;sup>1</sup> https://www.utwente.nl/en/ces/planning-schedules/academic-calendar/holidays-closing-days/
<sup>2</sup> https://www.utwente.nl/en/cps/planning-schedules/academic-calendar/holidays-closing-days/

#### 04 **4.4 Deadlines**

The deadlines for phase 1 are shown in table 4.4 and those for phase 2 are shown in table 4.5.

| What         | R       | Day     | Date             | Note                    |
|--------------|---------|---------|------------------|-------------------------|
| Project plan | 0.1     | Friday  | 2018 December 20 | Before 2018 December 10 |
|              | 0.2     | Tuesday | 2018 December 18 | Before 2018 December 19 |
|              | 1.0     | Friday  | 2018 December 21 | Before Christmas        |
| System       | 0.1     | Friday  | 2019 January 11  |                         |
| Requirements | 0.2     | Friday  | 2019 February 1  |                         |
|              | 1.0     | Friday  | 2019 February 8  |                         |
| Design       | concept | Friday  | 2019 March 1     |                         |
|              | choice  | Monday  | 2019 March 4     |                         |
|              | final   | Friday  | 2019 March 15    | Parallel development    |
| Realisation  |         | Friday  | 2019 March 29    | Including testing       |

Deadlines subject to change depending on weekly meetings

Table 4.4: Deadlines phase 1

| What         | R       | Day    | Date          | Note              |
